Course Description

This five-day class builds on our introductory training and class is designed to provide Control-M schedulers with the Administrator skills needed manage a Control-M environment.

The Control-M Administrator training class content encompasses the architecture, design, and configuration of Control-M and all its components. Intended for system administrators, this course highlights the hardware and software requirements of the system, how it communicates over networks, its database structure, and other aspects of the products.

The class explores the tools available for administering the Control-M environment, Interactive Labs and hands-on exercises are woven into the learning experience to enhance and reinforce key learning areas of administration.

Although working in a demo environment will provide the skills needed to administer any BMC Control-M environment for optimum learning outcomes we recommend using the client's existing infrastructure for this class.

Control-M Administrator Training Class Outline

Module 1: Overview

- Control-M Solution Overview
