

# Simplify and automate enterprise workloads that power your business

---

Organizations are turning to workload automation (WLA) solutions to meet job scheduling and event management challenges that also satisfy business policy requirements. End-to-end automation solutions efficiently monitor, manage, and automate critical processes and ultimately achieve operational cost savings.

For the largest K-12 school system in Washington State, workload automation reduced IT costs—immediately delivering \$100,000 in FTE savings. This alleviated program funding challenges, which strengthened schools and improved student success.

## Solution

---

CFS Consulting offers complete solutions to address your WLA initiatives from creating a vision, to charting your course with specific value-added enhancement programs and necessary best-practice training. Our projects have ranged from the straightforward provision of technical resources to assist customers on a day-to-day basis, to the delivery of complete Workload Automation turn-key solutions. Typical services include requirements definition, Project Management, Implementation Services, Migration/Upgrades, Health Checks, Training and, if needed, Staff retraining and productivity enhancement.

## Benefits

---

- Reduce the demand for people resources through management by exception
- Eliminate multiple points of management across mainframe and distributed system environments
- Reduce headcount and automate manual tasks
- Identify potential areas of concern and improve operations
- Improve flexibility to support business growth by moving from simple job scheduling to workload and event-driven automation

## Implementing Best Practices

---

CFS Consulting implements best practices on conversion and workload automation solutions to minimize risk and maximum efficiency. We focus on achieving faster time-to-value while meeting your automation goals. Our team works within your specific project plan to deliver on time and on budget by carrying out the following procedures:

- Review existing deployments and verify the inventory of external interfaces and security configuration of existing scheduling product to BMC product
- Review the infrastructure and architecture of existing, or review and verify planned, new scheduling and rerun/restart products
- Install and configure new scheduling and rerun/restart products as required, also loading and running conversion utilities as required
- Verify job schedules in the new scheduling product using simulations and comparisons
- Document configurations, solution maintenance plan and “lessons learned” from the current conversion to be used in subsequent scheduling database conversions
- Transfer knowledge to staff
- Prepare for, and then provide, support for production deployment of each in-scope product database

## Why CFS

---

- We're solution experts, not software vendors.
- Our experts have over 20 years IT & WLA experience.
- We have the flexibility and skill set to customize every job.
- We're experts at meeting regulatory compliance issues.
- We're with you for the long haul.

## Get Started

---

## About Us

---

CFS Consulting delivers strategic Workload Automation (WLA) products, services and solutions that deliver an enhanced return on technology investments enabling you to simplify, integrate and monitor your critical business processes from an enterprise point of view.

CFS Consulting also helps with regulatory compliance issues such as Sarbanes-Oxley (SOX) and HIPAA, simplifying your Workload Automation systems. Our customers are why we stand out from the competition and we boast an enviable and extensive track record of success in developing and implementing solutions from BMC Software and other vendors on behalf of diverse clients across a broad range of sectors.
